

**Insitu bridges the gap between performance and payload.**

## The Insitu Family of Unmanned Systems

*flies longer, carries greater payloads and is the most advanced collection of systems in its class.*

Introducing the newest member of the Insitu family: The Integrator™ provides the same superior combination of imaging performance and long endurance as the Insight and Boeing ScanEagle unmanned aircraft systems (UAS), but boasts expanded payload integration (25 to 50 lbs) for a wide variety of applications. All Insitu systems deliver a broad array of benefits, including safe ship-board operations without the use of nets, runway independence, real-time situational awareness and low cost. Insitu's solutions have been proven, over land and sea, for military, as well as commercial applications. Contact us now and discover how Insitu's systems bridge the gap between performance and payload.
